

NEW IN FUSING

New From Spectrum - System 96® Light Olive Cathedral (Arriving Mid March) SP 528.2SF

When it comes to green, there can never be too many options! The lighter side of Spectrum's Olive shade is bright, lively -- and destined to be a welcome addition in both the stained glass and fusing worlds. Light Olive complements original Olive for subtle shading nuance -- or pair it with ambers and/or blues for an especially rich natural palette.

Announced Feb. 5, 2010 by Evenheat - New Alarm Features On Rampmaster Control

Described by Evenheat: Evenheat announces a new and valuable Alarm enhancement to the Rampmaster control. The Alarm update consists of "Beginning of Process Hold" and "End of Process Hold" Alarms.

The process hold is the point during a glass firing where the glass moves and takes on new form, such as slumping or fusing. It's where all the magic takes place and the user needs to know when their firing has reached this point. These new alarms do just that.

The Beginning of the Process Hold Alarm alerts the user when the glass has reached the temperature where it's about to start taking on new form. Knowing when this occurs is very helpful as it puts the user in a timely position to react to the glass changes and make decisions and adjustments as necessary.

The End of Process Hold Alarm alerts the user when the glass has completed the shape changing process and is headed to the anneal portion of the firing. This allows the user to be present to stop further movement of the glass and to force cool down to the anneal if desired.

With these new Rampmaster alarm features users will never miss another opportunity to extend or shorten the firing process or to be present to stop further changes and quickly cool the kiln down to the anneal temperature.

We hope you enjoy these new alarms. They certainly make the Rampmaster that much more valuable and user friendly. We will be showing these new alarm features at Glass Craft Expo in Las Vegas. Stop by our booth and we'll demonstrate them to you. All Rampmaster equipped kilns ordered after Feb. 8th will include these new alarm features. There's no need to special order!!

Evenheat Kiln Inc.

NEW IN STAINED GLASS

GLASS PRO STAINED GLASS PUTTY

Neat, clean, easy to use - very low odor

GLASS PRO STAINED GLASS PUTTY was developed as the best combination of ease of use and suitability to purpose. Sold in plastic tubs, this product has the consistency similar to glazing putty, and is black in colour. Firms up quickly and does not run through the back of the panel.

Three Sizes Available:

- **CH 6680** 1/2 PINT, ABOUT 1 lb - sufficient to do about 2-4 sq ft of leaded glass
- **CH 6681** 1 QUART, ABOUT 4 lb - for heavy duty users. Will do about 10-15 sq ft (**available late March**)
- **CH 6682** 1 GALLON, ABOUT 16 lb This is the "studio size" and should do about 40-50 sq ft of leaded window.
- Your coverage will vary depending on lead to glass ratio and width/height of your came.

2008 Glass Patterns Quarterly and Glass Art Magazines Available In New Package (While Quantities Last)

BK 6450P

BK 6350P

We have now packaged 2008 issues of both Glass Patterns Quarterly (4 issues) and Glass Art (6 issues) Magazines. They are filled with great ideas and industry information. Although they are from 2008, they are still a great buy, filled with lots of information that is not dated. Catch up on what you've missed, plus many great patterns and projects.
